

For a better reality

We are in the business of building better realities — and not just virtual ones. We are working in partnership with others to scale inclusive solutions that support the transition to a zero-carbon economy and help create a healthier planet for all.

We see our role as protecting people and the planet by minimizing emissions and the energy and water used to power our data centers and workplaces while we work to protect workers and the environment in our supply chain.

Our approach

Our strategy is anchored by three pillars that help drive change across the communities in which we operate.

How we operate

What we create

How we collaborate

2023 highlights

- One of the largest renewable energy operating portfolio with more than 11,700 MW contracted and more than 6,700 MW online.
- 18 operational water restoration projects returned 1.5 billion gallons of water.
- Updated our Responsible Minerals Sourcing Policy to continue to address evolving expectations for the responsible sourcing of minerals.
- Set a science-based emissions reduction target and roadmapped a decarbonization strategy to systematically transform the way we do business.

Goals and commitments

- Achieve net zero emissions across our value chain in 2030.
- Continue matching 100% of our electricity use with renewable energy.
- Restore 200% of the water we consume in high water stress regions and 100% of the water we consume in medium water stress regions.
- Positively impact the communities and environment where we operate, and hold supply chain partners to these same standards.
- Reduce our Scope 1 and 2 emissions by 42% in 2031 from a 2021 baseline.
- Enable at least two-thirds of our suppliers to set science-aligned emissions reductions targets by 2026.
- Not exceed our 2021 baseline Scope 3 emissions by the end of 2031.
